At the Seabin Foundation's Ocean Health Lab, scientists study marine debris collected by the 30 Seabins stationed around Sydney Harbour. Today we will help them to analyse one catch from a Seabin.

Hypothesis

1. What kind of rubbish do you think will show up the most in the Seabin catch?

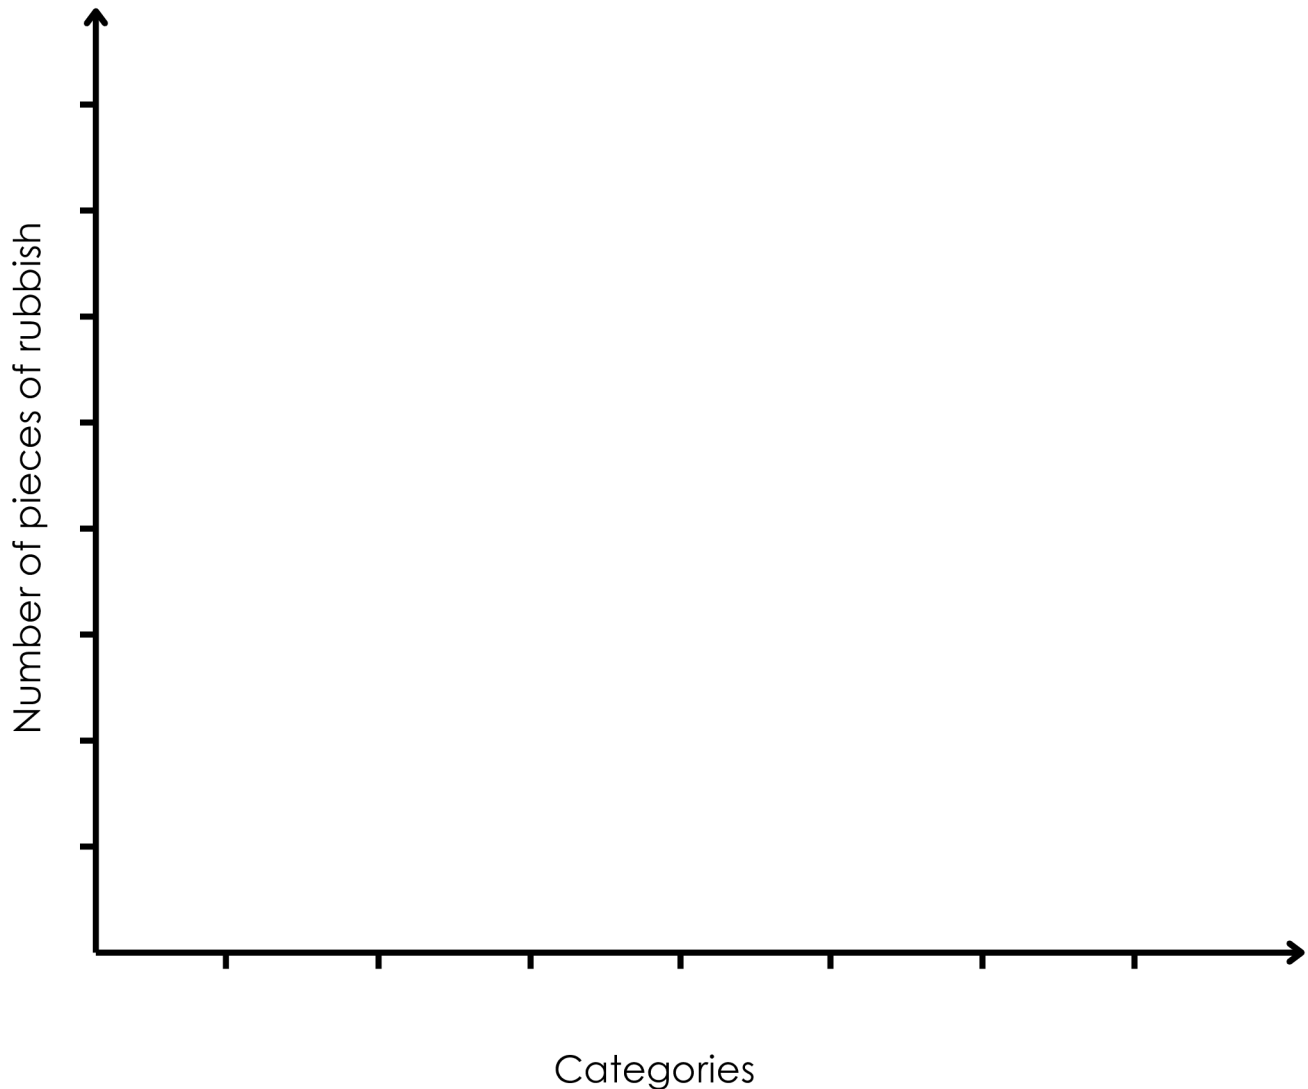

Data Collection

2. Record how many pieces of rubbish belong to each category using a tally.

Category	Number of pieces
Food wrappers	
Microplastics	
Soft plastic	
Bottles	
Food containers	
Fake grass	

Data Display

3. Create a graph showing how many pieces of rubbish were found from each category.

Results

4. What is the most common category of rubbish in this catch?

Reflection

5. What did you learn about ocean pollution?
